

ZUVIO GLOBAL SCHOOL

PARENT FAQ - ONLINE SCHOOLING

A quick guide for parents to understand Zuvio's online schooling model, curriculum, assessments, communication and student support.

1. What are the timings of online classes?

Zuvio follows age-appropriate class durations. Classes are scheduled within the **9:00 AM-1:00 PM** window, depending on the grade.

Pre-Primary: approximately 2 hours

Primary: approximately 2.5 hours

Middle School: approximately 3 hours

The timetable includes suitable breaks, interactive activities and a balanced mix of teacher-led and student-led learning.

2. How does online schooling work at Zuvio?

Zuvio Global School is a **100% online school** where students attend structured live classes with teachers from home. Students follow a planned timetable and academic calendar and receive learning resources, assignments, projects, assessments and teacher support through the school's digital learning ecosystem.

3. Is the Zuvio curriculum CBSE-mapped?

Yes. Zuvio's academic curriculum is **mapped to CBSE learning outcomes** and designed with reference to NEP 2020 and NCF guidelines. This supports grade-appropriate concepts, competencies and structured academic progression.

4. What is the Oxford theme-based curriculum approach?

Zuvio incorporates an **Oxford-based thematic learning approach**, where concepts are connected through meaningful themes instead of always being taught as isolated topics. A theme can bring together language, environmental studies, creativity, research, communication and real-world applications, helping children understand connections across subjects.

5. What is Project-Based Learning?

Project-Based Learning allows students to **learn by doing**. Students explore a question, challenge or real-life topic and create a project, presentation, model, report or solution. This helps develop critical thinking, creativity, communication, research, collaboration and problem-solving skills.

6. How is Artificial Intelligence integrated into the curriculum?

AI learning is introduced in an age-appropriate manner as part of Zuvio's future-ready learning approach. Students gradually learn AI concepts, responsible use of technology, problem-solving and practical applications. Zuvio's AI learning approach uses **IBM-supported/certified learning resources and frameworks**, subject to the applicable programme and certification requirements.

7. How are examinations and assessments conducted?

Assessment includes **formative assessments, projects, assignments, class participation, portfolios and summative assessments**. Formal assessments are conducted online according to school examination guidelines. For Nursery-UKG, assessment is primarily activity- and observation-based rather than dependent on formal written examinations. Parents receive regular feedback and progress reports.

8. Can parents speak directly with teachers?

Yes. Parents can communicate with teachers and the academic team through **WhatsApp groups, email, scheduled virtual meetings and Parent-Teacher Meetings (PTMs)**, depending on the requirement.

9. What is NIOS, and how does it relate to online schooling?

The **National Institute of Open Schooling (NIOS)** provides recognised open-schooling pathways in India. Where applicable, families seeking a formal open-schooling certification pathway can explore NIOS according to its prevailing eligibility, registration and examination requirements.

Important: NIOS and a CBSE-mapped curriculum are not the same. Curriculum mapping describes what and how a student learns, while NIOS is an examination/certification pathway.

10. Can my child move back to an offline school later?

Yes, students can transition from online learning to an offline school. Admission is governed by the **receiving school's admission policy, documentation, grade-level requirements and applicable board/regulatory rules**. Zuvio can support parents with relevant academic records and progress documentation.

11. Are co-curricular activities included in online schooling?

Yes. Co-curricular learning is planned **in sync with the academic curriculum**. Activities may include art, communication, storytelling, STEM, innovation, digital skills, presentations, competitions, projects and other age-appropriate enrichment experiences. The aim is to support academic, creative, social and emotional development.

12. Will children get enough interaction in an online school?

Yes. Live classes can include discussions, quizzes, presentations, show-and-tell, collaborative activities, projects, peer interaction and teacher questioning. Students are encouraged to actively participate rather than simply watch a screen.

13. How is student progress monitored?

Teachers monitor progress through classroom participation, assignments, projects, quizzes, assessments and portfolios. Regular reviews help identify learning gaps and determine where additional academic support may be required.

14. What happens if my child is struggling with a concept?

Teachers can identify learning gaps through continuous assessment and classroom interaction. Students may receive additional clarification, practice material and academic support according to their learning needs.

15. How much screen time will my child have?

Zuvio follows **grade-appropriate live-class durations**. Online lessons are complemented by offline activities such as reading, writing, worksheets, projects, art, research, experiments and hands-on learning. The objective is not to keep children continuously in front of a screen.

16. Is online schooling suitable for children living outside India?

Online schooling can be particularly useful for **NRI and internationally mobile families** seeking continuity in learning while living abroad or moving between countries. Families should separately check compulsory-schooling and recognition requirements applicable in their country of residence.

17. What support is provided to students joining in Term 2?

Students joining mid-session can undergo a **baseline/diagnostic assessment** to understand their current learning level. Teachers can then identify gaps and provide a **bridge learning plan** to support a smooth transition into the ongoing curriculum.

18. What makes Zuvio's online learning approach different?

Zuvio combines **structured academics, CBSE-mapped learning, thematic learning, project-based education, AI and digital skills, experiential learning, co-curricular activities and regular parent-teacher interaction** in a flexible online environment. The focus is on developing confident, independent and future-ready learners.

Note: Programme, curriculum, certification, examination and progression details are subject to applicable school policies and external provider/regulatory requirements. Partnership and certification references should be read according to the specific programme applicable to the learner.
